# **GS100 Tech Sheet**

# Balboa Water Group System PN 56300

System Model # MP7-GS100-DCA-3.0K Software Version # 41 EPN # 3825

Base PCBA - PN 56301 PCB VS100C - PN 24084 Rev A

Base Panels VL200 (Mini) – PN 55123 VL240 (MVP240) – PN 55080 VL260 (MVP260) – PN 55081 VL401 (LCD Lite Duplex) – PN 54665 VL403 (LED Lite Duplex) – PN 54664

Template used: 40743\_A.pdf 02/08/2007 56300\_97\_AX2.pdf 12/11/2012

### **Basic System Features and Functions**

#### **Power Requirements**

- 230VAC, 1~, 16A, 50Hz
- 3 wires (line, neutral, ground)

#### System Outputs

#### Setup 1 (As Manufactured)

- 230V Pump 1, 2-Speed
- 230V Ozone
- 10V Spa Light
- 230V 3.0kW Heater PN 58202

### **Basic System Features and Functions**

Any time you change a DIP Switch, other than A1, you must reset Persistent Memory for your new DIP Switch Settings changes to take effect. If you do not reset Persistent Memory, your system may function improperly.

#### To reset Persistent Memory:

- Power down by disconnecting power source from spa.
- Put a jumper across J43, covering both pins. (See illustration below)
- Power up by connecting power source to spa.
- Wait until "", is displayed on your panel.
- Power down again.
- Remove jumper from J43 (May also move to cover 1 pin only)
- Power up again.

#### About Persistent Memory and Time of Day Retention:

This system uses memory that doesn't require a battery to store a variety of settings. What we refer to as Persistent Memory stores the filter settings, the set temperature, and the heat mode.

Persistent Memory is not used for Time of Day. Only models with a Serial Deluxe panel installed (VS5xxDZ and GS5xxDZ) can display the time. However, during power loss to the spa, the system will lose the correct time, and reset to 12:00 PM when power is restored.

#### Power Up Display Sequence

Upon power up, you should see the following on the display:

- Three numbers in a row, which are the SSID (the System Software ID). The third display of these numbers is the Software Version, which should match the version of your system. For example, if these three numbers are (ロロ らっ ヨヨ, that is a VS511SZ at version 38.
- Displayed next is: "२५" (indicating the system is configured for a heater between 3 and 6 kW) or "12" (indicating the system is configured for a heater effectively\* between 1 and 3 kW).
  "२५" should appear for all VS models running at 240VAC.
  "12" should appear for all VS models running at 120VAC, as well as all GS models. (\*A heater which is rated at 4 kW at 240VAC will function as a 1 kW heater at 120VAC.)
- ""," will appear to signal the start of Priming Mode.

At this point, the power up sequence is complete. Refer to the Reference Card for the VS or GS System model of your spa for information about how the spa operates from this point on, including how to adjust the Time of Day if using a Serial Deluxe style panel.

## Wiring Configuration and DIP Settings

3.0kW @ 230VAC Heater

VI.401 Main Panel

# Setup 1 (As Manufactured)

•

- 230V Pump 1, 2-Speed
- **10V Spa Light**
- 230V Ozone (with Pump 1 Low)

LOCATION	DEVICE
J23	NETZSTROMVERSORGUNG 2-GESCHWPUMPE 1 ALIMENTATION POMPE 1 A 2 VITESSES 2-SPEED PUMP 1
J29	OZONGENERATOR GENERATOROZONE OZONE GENERATOR
J20	BELEUCHTUNG ECLAIRAGE BAIN HYDRO SPA LIGHT

**WARNING:** Main Power to system should be turned OFF BEFORE adjusting DIP switches. WARNING: Persistent Memory (J43) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page)

Panel Button Positions

3 4

Board Connector Key					
1 Typically Line voltage					
2 Typically Line voltage for 2-speed pumps					
3 Neutral (Common)					
4 Ground					
Note flat sides in connector					

### **DIP Switches and Jumpers Definitions**

### SSID 100 59 41

## **Base Model VS100**

#### **DIP Switch Key**

- A1 Test Mode (normally OFF)
- A2 "ON" position: Button layout will be: Pump 1, Light, Temp Down, Temp Up \* "OFF" position: Button layout will be: Unused, Pump 1, Temp, Light
- A3 "ON" position: use Mini Panel \* "OFF" position: use Lite Duplex or Digital Duplex panel Λ Λ N/A (must be OFF)

A4	N/A (MUST DE UFF)				
A5	A5 Pump 1 timeout, see Table 1		1	Pump 1 Timeouts	
A6	"ON" position: 50Hz operation				
	"OFF" position: 60Hz operation	<u>A5</u>	<u>A9</u>	Low-spd	Hi-spd
A7	"ON" position: Standard mode only	OFF	OFF	2 hours	15 min
	"OFF" position: Std/Ecn/Sleep mode changes allowed	ON	OFF	2 hours	30 min
A8	"ON" position: temperature is displayed in degrees Celsius	OFF	ON	15 min	15 min
	"OFF" position: temperature is displayed in degrees Fahrenheit	ON	ON	30 min	30 min
A9	Pump 1 timeout, see Table 1		UN	00 11111	00 11111

A10 "ON" position: heater is disabled while the high-speed pump is running (low amperage mode) "OFF" position: heater can run while the high-speed pump is running (high amperage mode)

\* Panels with button layout 🗄 📲 🗉 are not compatible when A2 or A3 is ON.

Note: No blower or second pump available.

#### Jumper Key

J43 When jumper is placed on 2 pins during power-up, system will reset persistent memory. Leave on 1 pin only to enable persistent memory feature.

#### WARNING:

- Setting DIP switches incorrectly may cause abnormal system behavior and/or damage to system components.
- Refer to Switchbank illustration on Wiring Configuration page for correct settings for this system.
- Contact Balboa if you require additional configuration pages added to this tech sheet.

### **Ozone Connections**

**<u>Ozone Connector Voltage</u>**: The VS100 circuit board is factory configured to deliver a preset voltage of 120V to the on-board ozone connector (J29).

**<u>Balboa Ozone Generator</u>**: The board is set up to operate a 120V ozone generator; the connector on the ozone generator is likely to be configured correctly, but should be compared to the illustration below.

*Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.* 

### **Duplex Panel Configurations**

• Connects to Main Panel terminal J1
